Summary

Software Engineer specializing in backend development, AI solutions, and system integration. Experienced in building enterprise-grade applications with Java/Spring Boot, Python, and TypeScript. Currently working in the R&D AI Solutions team at Intercom Enterprises, building AI-powered tools and automation solutions that support multiple teams across the company.

Experience

Intercom Enterprises

Cairo, Egypt

Software Engineer, R&D AI Solutions

01/2025 - present

Supported multiple teams across the company by building AI-powered tools and enterprise applications to automate and streamline their workflows.

- **Company-wide:** Designed and developed the Correspondence Management System (CMS), an enterprise modular monolith using Spring Boot 4, Angular 21, PostgreSQL 16, and Flowable workflow engine.
- **Company-wide:** Built a production-ready RAG Agent using Flask, PostgreSQL with pgvector, and Google Generative AI, enabling employees to query company documents such as policies and internal guidelines through a conversational interface.
- **ECM/FileNet & ECM/OpenText Teams:** Developed the ECM Document Generator, a full-stack application (Angular 18 + Node.js/TypeScript) integrating Google Gemini API to automate the creation of technical proposals, taxonomy definitions, and subscription event configurations from analysis documents.
- **ECM/FileNet & ECM/OpenText Teams:** Created an AI-powered Solution Design Document generator using Flask, LangChain, and FAISS-based RAG pipeline to automate ECM solution design from analysis documents.
- **Financial Team:** Built a bilingual (Arabic/English) document generator desktop application with Python and Tkinter to automate the generation of financial proposals.
- **Support Team:** Developed a multi-layer log filtering system in TypeScript to help first-layer support engineers investigate issues by isolating relevant entries from bank-submitted logs.

Intercom Enterprises

Cairo, Egypt

Back End Developer and Support

06/2024 - 12/2024

Supported multiple banking projects, ensuring the stability and performance of critical systems.

- Supported multiple banking projects including contributions to the United Bank, Banque du Caire, Arab International Bank, and Housing and Development Bank.
- Provided back-end development and support, ensuring the stability and performance of critical banking systems.

Intercom Enterprises

Cairo, Egypt

Back End Developer

10/2023 - 12/2023

Full-time position focusing on backend development for banking systems.

- Worked on the United Bank project, managing both front-end and back-end roles.
- Improved transaction speed by developing an instant payment process using Struts 2.

Intercom Enterprises

Cairo, Egypt

Digital Integration Trainee

08/2023 - 09/2023

Internship focusing on digital integration projects.

- Developed a fully functional CRUD demo for an online bookstore showcasing integration capabilities.
- Created an MVC demo focused on student data management.
- Integrated with OpenText for efficient document retrieval.
- Led the development of a Blood System API with IBM API Connect ensuring accurate ID validations.

Intercom Enterprises

Cairo, Egypt

Trainee role focused on robotic process automation.

- Worked with automation technologies for robotic process automation tasks.
- Extracted data, filled forms, and moved files using RPA.

Trainee role focused on business process management development.

- Car Mechanic Workflow: Designed and implemented a streamlined workflow in Appian BPM that efficiently checks and retrieves car data, automating the process of sending necessary information to mechanics for repairs.

Education

Quantic School of Business and Technology

Washington, DC (Online)

Master of Science in Software Engineering

06/2025 - 08/2026

DEAC-accredited program focused on AI-driven software engineering, system design, and modern development practices.

Ain Shams University

Cairo, Egypt

Bachelor of Computer and Information Science

09/2019 - 05/2023

Graduation Project

01/2023 - 06/2023

Successfully developed a Driver Behavior Detection System showcasing my ability to implement advanced technologies and machine learning models.

Strengths

AI & LLM Development Building AI solutions with LangChain, RAG pipelines, Google Gemini, FAISS, and pgvector.	Back-End Development Experience in back-end development using Spring Boot, Flask, Node.js, and Struts.	Full-Stack Development Building end-to-end applications with Angular, TypeScript, and Node.js frontends paired with robust backends.
Programming Skills Strong programming skills in Python, Java, TypeScript, JavaScript, and C++.	BPM & RPA Development Capable of working on business process management (Appian BPM) and robotic process automation (UiPath Studio).	Other Technical Strengths API design and integration, Docker, PostgreSQL, Elasticsearch, Redis, Git.

Certificates & Training

Digital Egypt Pioneers Program — Vulnerability Analyst / Penetration Tester — Ministry of Communications and Information Technology of Egypt (Infrastructure and Security). Nov 2024 - May 2025.

McKinsey.org Forward Program — Practical skills for problem-solving, communication, adaptability, and building a digital toolkit. Dec 2025.

Spring Boot 3 — Course focused on the Spring Boot framework to enhance backend development skills.

Comprehensive Cybersecurity Bootcamp — Intensive bootcamp covering various aspects of cybersecurity.

RPA Developer Foundation — Foundation course for RPA Development focused on automation technologies.

Appian Development — Course on Appian development covering business process management solutions.

Front End Diploma — Diploma covering front-end development technologies and frameworks.

Cybersecurity Fundamentals Workshop — Workshop introducing fundamental concepts in cybersecurity.
