Summary

I am a dedicated Computer and Information Science graduate with a strong focus on backend development, particularly in Java and Spring Boot. My academic projects, like the Driver Behavior Detection System, reflect my proactive approach to implementing advanced technologies. Currently, I am expanding my expertise through hands-on experience at Intercom Enterprises, where I contribute to various banking projects.

Experience

Intercom Enterprises Cairo, Egypt
Back End Developer and Support 06/2024 - present

Part-time role focused on backend development and support for banking systems.

- Supported multiple banking projects including contributions to the United Bank, Banque du Caire, Arab International Bank, and Housing and Development Bank.
- Provided back-end development and support, ensuring the stability and performance of critical banking systems.

Intercom Enterprises Cairo, Egypt
Back End Developer 10/2023 - 12/2023

Full-time position focusing on backend development for banking systems.

- Worked on the United Bank project, managing both front-end and back-end roles.
- Improved transaction speed by developing an instant payment process using Struts 2.

Intercom Enterprises Cairo, Egypt
Digital Integration Trainee 08/2023 - 09/2023

Internship focusing on digital integration projects.

- Developed a fully functional CRUD demo for an online bookstore showcasing integration capabilities.
- Created an MVC demo focused on student data management.
- Integrated with OpenText for efficient document retrieval.
- Led the development of a Blood System API with IBM API Connect ensuring accurate ID validations.

Intercom Enterprises Cairo, Egypt
RPA Developer Trainee 07/2022 - 09/2022

Trainee role focused on robotic process automation.

- Worked with automation technologies for robotic process automation tasks.
- Extracted data, filled forms, and moved files using RPA.

Intercom Enterprises Cairo, Egypt
BPM Developer Trainee 02/2022 - 03/2022

Trainee role focused on business process management development.

- Car Mechanic Workflow: Designed and implemented a streamlined workflow in Appian BPM that efficiently checks and retrieves car data, automating the process of sending necessary information to mechanics for repairs. Revolutionizing the automotive service industry through automation.

Education

Ain Shames University Cairo, Egypt
Bachelor of Computer and Information Science 09/2019 - 05/2023

Graduation project Location
Successfully developed a Driver Behavior Detection System showcasing my ability to implement advanced technologies and machine learning models. 01/2023 - 06/2023

Strengths

Programming Skills	Front-End Development	Back-End Development
Strong programming skills in various languages, including Python, Java, C++, JavaScript, and R.	Proficient in front-end development with a good understanding of React.js and Bootstrap.	Experience in back-end development using Spring Boot, Struts, and Flask.

Strengths

BPM and RPA Development

Capable of working on business process management and robotic process automation.

Cybersecurity Knowledge

Familiar with cybersecurity concepts.

Skills

API .bootstrap Appian BPM Cybersecurity dbms network IBM api connect Front-end Java .Machine Learning MVC .Python react.js . robotic process automation Spring Boot Struts 2 UiPath studio wordpress php Your Skill

Training / Courses

Spring Boot 3 — Course focused on the Spring Boot framework to enhance backend development skills.

Comprehensive Cybersecurity Bootcamp — Intensive bootcamp covering various aspects of cybersecurity.

RPA Developer Foundation — Foundation course for RPA Development focused on automation technologies.

Appian Development — Course on Appian development covering business process management solutions.

Front End Diploma — Diploma covering front-end development technologies and frameworks.

Cybersecurity Fundamentals Workshop — Workshop introducing fundamental concepts in cybersecurity.

Projects

[Ordering online mvc](#)

2024 - Present

This is ordering online food project about collecting all orders in one invoice in one room

- Help me to know about MVC using springboot frame work and add more skills in using mysql

[Student management system](#)

07/2024 - 08/2024

A simple and efficient Student Management System built using the Spring Boot framework

- This project provides basic CRUD (Create, Read, Update, Delete) operations for managing student records. It is designed following the Model-View-Controller (MVC) architectural pattern.

[SoapUI Integration](#)

07/2024 - 08/2024

This project demonstrates the integration of a Java backend with SoapUI

- validate phone numbers and determine the SMS sending behavior. The project provides a simple yet powerful tool for checking phone number validity and simulating SMS delivery based on the entered number.

[OCR Invoice Analyst](#)

07/2022 - 09/2022

Utilizes UiPath's OCR capabilities

- Extract information from image-based invoices, thus improving the accessibility and processing of invoice data.

[Predicting Housing Price](#)

03/2022 - 06/2022

Analysis of house price prediction using various models.

- Know about analysis and used R language

[N-Puzzle game](#)

04/2022 - 06/2022

Showcases a C++ implementation of a solver for the N-Puzzle game.

- The software efficiently solves N-Puzzle for various sizes using a priority queue, optimizes memory with custom arrays, manages data dynamically through vectors, and maintains readability and structure in its well-commented code.
